General Information

LeadsOnline accepts many different file formats for submission of transactional data, such as XML, comma delimited ASCII, and dBase IV. This document highlights the details of the LeadsOnline XML format for recycling yards. Items are entered one to a line. Each item on a ticket is treated as its own record within the file. For information on naming the file, refer to the "Uploading Data to LeadsOnline" document. Items are entered one to a line. Each item on a ticket is treated as its own record within the file. For information on naming conventions, refer to the "Uploading Images" document.

Property Record Format

All XML documents should begin with an XML declaration, which is a processing instruction that ensures XML documents are read properly by XML-compliant tools.

The XML declaration states the version of XML, the type of character encoding being used and the markup declaration requirements of XML documents. All XML declarations must begin with the 5 character string: `<?xml`. This string states to document readers that the particular document being read is an XML document, as opposed to another type, such as SGML or RTF. XML declarations must also state which version of XML a particular document complies with. The current and only version of XML is 1.0, so all XML declarations also include the following name and quoted value: `version="1.0"`. The character encoding type of a document can be declared via the encoding declaration. Although this declaration is not normally necessary, UTF-8 and US-ASCII are commonly used encoding formats.

Example:

```
<?xml version="1.0" encoding="utf-8" ?>
```

Only one top level element is allowed per XML file. We call this element the `<LeadsOnlineUpload>` element.

Field Definitions – Software Header

1. **Software Name** `<name>`
[Character Data, Length: 150]
2. Software version `<version>`
[Character Data, Length: 50]

Field Definitions – Business Header

<store_info> is a child of the <LeadsOnlineUpload> element and contains the following elements:

1. **Company Name** <company_nm>
[Character Data, Length: 150]
2. **Company Assigned Store Number** <store_number>
[Character Data, Length: 50]
3. **Store Name** <store_nm>
[Character Data, Length: 150]
4. **Store Address** <store_addr1>
[Character Data, Length: 100]
5. **Store Address Line 2** <store_addr2>
[Character Data, Length: 100]
6. **Store City** <store_city>
[Character Data, Length: 50]
7. **Store State** <store_state>
[Character Data, Length: 25]

State abbreviations may be used in this field.

8. **Store Postal Code** <store_zip>
[Character Data, Length: 10]
9. **Store County** <store_county>
[Character Data, Length: 50]
10. **Store Phone** <store_phone>
[Character Data, Length: 20]

Field Definitions – Transaction Header

<tickets> is a child of the <LeadsOnlineUpload> element and contains a collection of <ticket> elements. Each <ticket> element contains ticket header elements (listed below) along with a <customer> and <property> element.

1. **Transaction Type** <ticket_type>
[Enumerated Numeric Data]
 1. 0 – Unknown
 2. 1 – Buy

3. 2 – Pawn
4. 3 – Trade
5. 4 – Check Cashed
6. 7 – Consignment
7. 9 – Redeemed
8. 10 – Renew
9. 11 – Sold

2. **Transaction Number** <ticket_number>
[AlphaNumeric Data, Length: 25]

Unique numeric transaction/ticket/receipt number associated with the transaction. Customers will typically have 1 transaction number per visit. Only letters, numbers, and hyphens accepted.

3. **Transaction Date** <enter_date>
[DateTime Data, yyyy-mm-ddThh:mm:ss]

Date and time of the transaction using military time. If the time is unknown, use 00:00:00 for the time component of this field.

Example: <enter_date>2007-11-26T15:44:08</enter_date>

4. **Clerk Name** <clerk>
[Character Data, Length: 50]

Name or ID of the clerk who handled the transaction.

5. **Is Void?** <void>
[Character Data, Y/N]

Is the transaction voided? Y = VOIDED, N = NOT VOIDED

6. **Redemption Date** <redeem_date>
[DateTime Data, yyyy-mm-ddT00:00:00]

Date the pawn loan must be redeemed by. If unknown or not applicable, leave this field blank.

Example: <redeem_date>2007-12-26T00:00:00</redeem_date>

7. **Original Transaction Number** <ticket_number_orig>
[AlphaNumeric Data, Length: 25]

If the transaction is a renew or redeem, include the original ticket number here. If the transaction was not a renew or redeem or the ticket number is the same, leave this field blank. Only letters, numbers, and hyphens accepted.

8. **Original Transaction Date** <enter_date_orig>
[DateTime Data, yyyy-mm-ddT00:00:00]

If the transaction is a renew or redeem, include the original ticket number here. If the transaction was not a renew or redeem, leave this field blank.

9. **Pledgor Statement** <pledgor_statement> – **OPTIONAL**
[AlphaNumeric Data, Length: 2,000]

Field Definitions – Customer Information

<customer> is a child of the <ticket> element and contains the following children.

- **Customer Last Name** <cust_nm_last>
[Character Data, Length: 50]
- **Customer First Name** <cust_nm_first>
[Character Data, Length: 25]
- **Customer Middle Name** <cust_nm_middle>
[Character Data, Length: 25]
- **Customer Name Suffix** <cust_nm_suffix>
[Character Data, Length: 10]
- **Customer Address** <cust_addr1>
[Character Data, Length: 100]
- **Customer Address Line 2** <cust_addr2>
[Character Data, Length: 100]
- **Customer City** <cust_city>
[Character Data, Length: 50]
- **Customer State** <cust_state>
[Character Data, Length: 25]

State and Province abbreviations may be used in this field.

- **Customer Postal Code** <cust_zip>
[Character Data, Length: 10]
- **Customer Phone** <cust_phone>
[Character Data, Length: 20]
- **Customer ID Type** <cust_id_type>
[Character Data, Length: 25]

Type of ID the customer presents at the time of transaction, such as Driver's License, Social Security, Passport, Military ID, etc. Abbreviations can be used.

Example: "DL" for Driver's License
<cust_id_type>DL</cust_id_type>
<cust_id_state>TX</cust_id_state>
<cust_id_number>12345555</cust_id_number>
<cust_id_type2>Passport</cust_id_type2>
<cust_id_state2 />
<cust_id_number2>67891234</cust_id_number2>

- **Customer ID State** <cust_id_state>
[Character Data, Length: 2]

If the ID supplied is a state issued ID, the state should be defined here, using 2-letter state abbreviations. If the ID is a federal ID, leave this field blank.

- **Customer ID Number** <cust_id_number>
[Character Data, Length: 50]
- **Customer ID Expiration** <cust_id_exp>
[DateTime Data, yyyy-mm-ddT00:00:00]

If expiration date is unknown, leave this field blank.

- **Customer ID Issue Date** <cust_id_issue_dt> – OPTIONAL
[DateTime Data, yyyy-mm-ddT00:00:00]
- **Customer Second ID Type** <cust_id_type2>
[Character Data, Length: 25]
- **Customer Second ID State** <cust_id_state2>
[Character Data, Length: 2]

- **Customer Second ID Number** <cust_id_number2>
[Character Data, Length: 50]
- **Customer Second ID Expiration** <cust_id_exp2>
[DateTime Data, yyyy-mm-ddT00:00:00]

If expiration date is unknown, leave this field blank.

- **Customer Second ID Issue Date** <cust_id_issue_dt2> – OPTIONAL
[DateTime Data, yyyy-mm-ddT00:00:00]
- **Customer Date of Birth** <cust_birthdate>
[DateTime Data, yyyy-mm-ddT00:00:00]
- **Customer Weight** <cust_weight>
[Numeric Data]

Values will be treated as pounds.

- **Customer Height** <cust_height>
[Character Data, Length: 6, f'ii"]

Example: <cust_height>5'06"</cust_height>

- **Customer Eye Color** <cust_eye>
[Character Data, Length: 10]
- **Customer Hair Color** <cust_hair>
[Character Data, Length: 10]
- **Customer Race** <cust_race>
[Character Data, Length: 20]
- **Customer Sex** <cust_sex>
[Character Data, Length: 10]
- **Other Information About Customer** <cust_info>
[Character Data, Length: 100]

Include distinguishing marks or comments the clerk may have included about the customer at the time of the transaction.

- **Customer Picture** <cust_picture>
[Base64 Encoded Data, Length: <100k]

Any customer images can be sent using the <cust_picture> element. Multiple <cust_picture> elements may be used within a single <customer> element to include all necessary images, 1 base64 encoded image per <cust_picture> tag. This allows images of the customer, thumbprint, etc, or any combination to be uploaded as necessary. Scanned document images (code "D") may be sent as type "jpg" or "pdf".

Attributes:

- type = "gif"
- type = "jpg"
- type = "pdf" – valid on code "D" (scanned document) only.
- code = "C" – customer image
- code = "I" – customer ID image
- code = "T" – customer thumbprint
- code = "S" – customer signature
- code = "D" – customer scanned document

Field Definitions – Customer Work Information

These fields belong within the <customer> element:

1. **Employer Name** <employer_nm>
[Character Data, Length: 150]

Employer information should be populated when the customer is representing a company for the transaction, and the represented company is not listed as the customer.
2. **Employer Address** <employer_addr1>
[Character Data, Length: 100]
3. **Employer Address Line 2** <employer_addr2>
[Character Data, Length: 100]
4. **Employer City** <employer_city>
[Character Data, Length: 50]
5. **Employer State** <employer_state>
[Character Data, Length: 25]

State and Province abbreviations may be used in this field.

6. **Employer Postal Code** <employer_zip>
[Character Data, Length: 10]
7. **Employer Phone** <employer_phone>
[Character Data, Length: 20]

Field Definitions – Property Information

<property> is a child of the <ticket> element and contains a collection of <item> elements. Each <item> element contains the following children:

1. **Line Item Number** <item_number>
[AlphaNumeric Data, Length: 25]

Transactions may contain more than one item. This field is used to ensure a unique identifier for the item within the transaction. This should reflect the sequence position of the item within the transaction. Only letters, numbers, and hyphens accepted.

Example:

```
<ticket_number>101</ticket_number>
<property>
  <item>
    <item_number>1</item_number>
    <item_desc>My first item on ticket 101</item_desc>
  </item>
  <item>
    <item_number>2</item_number>
    <item_desc>My second item on ticket 101</item_desc>
  </item>
</property>
```

2. **Item Quantity** <item_qty>
[Numeric Data]

Item records which reference batches of items, for example "25 DVDS" or "10 GAMES" should define the quantity here.

3. **Item Make** <item_make>
[Character Data, Length: 50]

Make if the item, if available.

4. **Item Model Number** <item_model>
[Character Data, Length: 50]

Model number of the item, if available.

5. **Item Serial Number** <item_serial>
[Character Data, Length: 50]

Serial number of the item, if available.

6. **Owner Applied Number** <item_oan>
[Character Data, Length: 50]

Serial number of the item, if available.

7. **Item Color** <item_color>
[Character Data, Length: 10]

8. **Item Condition** <item_condition>
[Character Data, Length: 25]

9. **Item Description** <item_desc>
[Character Data, Length: 250]

Include any information here about the item to help identify the item that could not be included in other fields.

10. **Item Notes** <item_notes>
[Character Data, Length: 250]

Include any information here about the item beyond the description that the clerk may have considered noteworthy. Some software tracks Log#'s for firearms. That information, for example, could be supplied here.

11. **Item Category** <item_category>
[Enumerated Numeric Data]

- 0 – Other
- 1 – Jewelry
- 2 – Firearm

12. **Item NCIC Code** <item_ncic>
[Character Data, Length: 8]

NCIC code for the item, if known. Supplying this field does not exempt the need for a

description.

13. **Amount Paid for Item** <item_amount>
[Numeric Data]

This is the amount of money paid for the item. Do not include a dollar sign (\$).

Example: <item_amount>15.00</item_amount>

14. **Item Picture** <item_picture>
[Base64 Encoded Data, Length: <100k]

Any item images can be sent using the <item_picture> tag. Multiple <item_picture> elements may be used within a single <item> element to include all necessary images for the item, 1 base64 encoded image per <item_picture> tag.

Attributes:

- type = "gif"
- type = "jpg"
- etc.
- code = "A" – property image

Field Definitions – Jewelry Specific Information

These fields also belong in the <item> element:

1. **Jewelry Style** <jewelry_style>
[Character Data, Length: 25]
2. **Jewelry Metal** <jewelry_metal>
[Character Data, Length: 10]
3. **Jewelry Metal Karat** <jewelry_kt>
[Numeric Data]
4. **Jewelry Weight** <jewelry_wt>
[Character Data, Length: 15]

Do not include the unit of weight here.

5. **Jewelry Unit of Weight** <jewelry_wt_unit>
[Character Data, Length: 10]

6. **Jewelry Size or Length** <jewelry_size>
[Character Data, Length: 10]

Record the size of rings, necklaces, etc. in this field.

Examples:

```
<property>
  <item>
    <item_desc>Ring</item_desc>
    <jewelry_size>7.5</jewelry_size>
  </item>
  <item>
    <item_desc>Necklace</item_desc>
    <jewelry_size>22" </jewelry_size>
  </item>
</property>
```

7. **Jewelry Gender** <jewelry_sex>
[Character Data, Length: 10]
8. **Jewelry School Class Name** <jewelry_class_nm>
[Character Data, Length: 50]

If the jewelry is a class ring, include the class name here.

9. **Jewelry School Class Year** <jewelry_class_yr>
[Numeric Data, Length: 4]

If the jewelry is a class ring, include the class year here.

10. **Primary Stone Type** <jewelry_stone1_type>
[Character Data, Length: 15]
11. **Primary Stone Color** <jewelry_stone1_color>
[Character Data, Length: 10]
12. **Primary Stone Quantity** <jewelry_stone1_qty>
[Numeric Data]
13. **Primary Stone Shape/Cut** <jewelry_stone1_shape>
[Character Data, Length: 10]

14. **Primary Stone Carat** <jewelry_stone1_carat>
[Character Data, Length: 10]
15. **Secondary Stone Type** <jewelry_stone2_type>
[Character Data, Length: 15]
16. **Secondary Stone Color** <jewelry_stone2_color>
[Character Data, Length: 10]
17. **Secondary Stone Quantity** <jewelry_stone2_qty>
[Numeric Data]
18. **Secondary Stone Shape/Cut** <jewelry_stone2_shape>
[Character Data, Length: 10]
19. **Secondary Stone Carat** <jewelry_stone2_carat>
[Character Data, Length: 10]

Field Definitions – Firearm Specific Information

These fields also belong in the <item> element:

1. **Firearm Caliber** <firearm_caliber>
[Character Data, Length: 10]
2. **Firearm Type** <firearm_type>
[Character Data, Length: 15]
3. **Firearm Action** <firearm_action>
[Character Data, Length: 10]
4. **Firearm Finish** <firearm_finish>
[Character Data, Length: 15]
5. **Firearm Barrel** <firearm_barrel>
[Character Data, Length: 15]

Additional Notes

- All elements must be included in each transaction whether populated or empty.
Populated <cust_addr2>Apt. 3A</cust_addr2>
Empty <cust_addr2></cust_addr2> or <cust_addr2 />

- The file submitted to LeadsOnline is a flat ASCII text file. Control characters found within the file may prevent the file from passing validation.
- Any field within an XML file containing a <, >, or & must be escaped.

& must be escaped as &

< must be escaped as <

> must be escaped as >

- The first file extract delivered to LeadsOnline.com will be a full extract of all data records for the last three calendar years, plus the present year-to-date. All subsequent uploads will deliver only new data or data that has changed within the last 7 days.
- Supply as much of the information as your software will allow.
- Multiple uploads with overlapping data and date ranges will not cause a problem with our system. We filter duplicate records.

Example

An example file may look like:

```
<?xml version="1.0" encoding="utf-8" ?>
<LeadsOnlineUpload>
  <software>
    <name>My LeadsOnline Software</name>
    <version>1.1</version>
  </software>
